

SIZING GUIDELINES

ACHIEVING A PROPER FIT - THE IMPORTANCE OF YOUR "EYE-TEETH"

UA Performance Mouthwear™ products are available in two sizes: Adult (12+) and Youth (Adult Small). The Adult size will fit about 70% of adults. The Youth (Adult Small) will fit the remaining 30% of adults and most kids age 8-12.

However, the mouth is a unique part of the body and doesn't always correlate to height, weight or age. For best results, we recommend measuring the distance between your two "eye-teeth" to determine the proper size of UA Performance Mouthwear™ (UA Mouthguard, ArmourBite® Mouthguard and ArmourBite® Mouthpiece). Your "eye-teeth" – also referred to as "canine teeth" – are found in your upper arch (see Fig. 1).

FIG. 1 EYE TEETH

INSTRUCTIONS

IMPORTANT: Make sure to print this sheet at 100% actual size for an accurate test fit result. To verify scale, you should compare the reference scale (see Fig. 2) to a ruler.

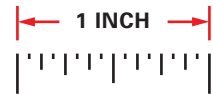

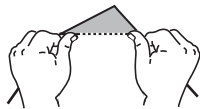

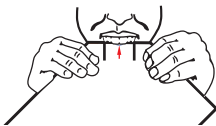

FIG. 2 REFERENCE SCALE

1

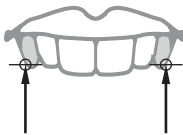

Print this page and fold back right bottom corner of sheet along the dotted line.

2

Using a mirror, slide the paper between your teeth. Position center line between your two front teeth.

3

Take note of the position of the OUTSIDE of your "eye-teeth". They will fall either in the "ADULT" or "YOUTH" zone — indicating which size will fit you best.
